January 2023

The challenge

About LINKS...

The LINKS project is an Erasmus+ project that was launched on March of 2022 and serves two purposes by directly and actively assisting youth workers in the development and enhancement of their digital sovereignty and security skills and competencies.

...project

.1.Youth workers will increase and broaden their expertise on a personal level.
2. NGOs and other groups funded by these organizations will be well-protected and guaranteed against abuse and/or cyber-attacks on a societal level.

Digital sovereignty is a new term that contends that individuals should be in charge of their own digital data. Digital sovereignty on a personal level illustrates people's ability to manage their personal data's use and ownership. A sophisticated ecosystem has been developed to collect, analyze, and exchange the new crude asset known as personal data. But the data economy and the growing digital transformation raise a number of serious issues.
The issues of digital sovereignty and data/privacy protection take on even more significance when it comes to youth workers and their activities.

FOLLOW US:

Our solution

LINKS Digital Sovereignty Competences Framework: The Framework of Digital Security Competences will define the key components of competences needed by youth workers to effectively integrate digital sovereignty and security protocols into their localized contexts, as well as to provide and validate an EU reference framework for developing and evaluating digital security competence

DATA PROTECTION

LINKS Online training resources and platform for digital sovereignty competencies Based on the primary competencies and skills identified and covered by the LINKS Digital Sovereignty Competencies Framework, PR2 activities will concentrate on the creation of cutting-edge training materials designed to help youth workers acquire the skills they need to advance their level of digital sovereignty and train others as part of their jobs.

The partnership is currently working on the finalization of the Digital Sovereignty Framework and all materials will be uploaded on project's website
